User opinions That's what people say about Ideal Photo Sorter possibilities:"I had several hard drives full of different photo cameras in the different years. I am photojournalist and travel around the world with my photo cameras. In the past all photos were made on photographic films and are stored, being printed on the paper. Today I use digital photo cameras with high resolution, such as Nikon TX Extra. I stored all my photos on my notebook and several mobile hard drives. Finally, all photos mixed up and I even could not find photos from my last trip to Burma. I even did not know, what to do. But my colleague advised me to use Ideal Photo Sorter. I installed it and it sorted all photos, that I had directly as I wanted (by camera model and date, when photo was made). I even did not supposed, that such clever photo sorters exist. Ideal Photo Sorter saved very many of my time - all my photos are now in the ideal order. Ideal Photo Sorter - is a program, which really helps people to organize their photo collection easily."

Greg List, photojournalist of newspaper "New York Times" Our mission

Today life is impossible to imagine without information, and information - without files. By reports, provided by

independent researches, now more than 95% of information is stored in files.

In 1970's, when first floppy disk was invented, it had 0,1 Megabyte size and often hold up to 15 files. In 1980's was invented CD disk, that already had 500 Megabyte size and could hold already thousands of files. In 1990's became popular DVD disks, that could carry already dozens of thousands of files. Today most of files are stored on HDD (Hard Disk Drives), that are presented in every computer. They have size beginning from 80 000 Megabyte and hold millions of documents.

Several weeks ago was already started production of Hard disk with 470 000 Megabytes size, that is able to store already milliards of photos in variety of formats.

When on a computer are stored such variety of photos, especially if they are packed in numerous of archives, it is extremely hard to navigate between them. People often don't know, what photos and where are stored.

When in a folder several hundreds, or even thousands of files with names like "894.jpg", "important(12).psd", "photos14.rar", "confer64.bmp", "d12.zip" it will be needed days, or even weeks and months to understand, what is what, rename all and move all in folders, according to content.

A whole directories are deleted, cause there is no possibility to find out, what is inside and use such content. You are in the danger! Is any solvation of such heavy situation? Yes, and it is - Ideal Photo Sorter.
