

Where sorted music, mp3, photo and other media files are moved?

Question:

I started sorting of my media files (music, mp3, photo, books and other media files), all they were sorted. Where they are now located?

Answer:

While sorting files from source folder are organized and copied or moved (according of your choice on appropriate wizard step) to database folder.

Database folder by default is located on the desktop and have the name “Ideal Sorter Database folder”. You can change its address at appropriate step of start-up wizard. To view content of currently selected database folder in the Ideal Sorter main window press “View” -> “Database folder” and database folder will be opened. There you will see all your organized, sorted and renamed media files.
